Project Proposal (Proposed Solution) Report

The proposal report aims to transform brand content generation using generative AI and natural language processing, boosting marketing efficiency and voice consistency. It tackles manual copywriting bottlenecks, promising better operations, reduced editing time, and aligned brand messaging. Key features include automated brand voice extraction, prompt enforcement, and real-time content generation.

Project Overview

Objective	The primary objective is to revolutionize the brand content creation process by implementing advanced generative AI techniques, ensuring faster and contextually accurate marketing copy.
Scope	The project comprehensively assesses and enhances the content generation workflow, incorporating LLM-based profile extraction for a robust and consistent messaging system.

Problem Statement

Description	Addressing tone inconsistencies and manual rewriting delays in current content workflows that adversely affect marketing ROI and brand identity
Impact	Solving these issues will result in improved operational efficiency, reduced campaign turnaround times, and an overall enhancement in audience engagement.

Proposed Solution

Approach	Employing generative AI and prompt engineering to analyze sample text and generate tailored content, creating a dynamic and adaptable brand voice system.
Key Features	• Implementation of an automated brand profile extraction model. • Real-time content generation enforcing consistent tone and style. • Dynamic prompt guidelines that adapt to evolving marketing needs.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		

Computing Resources	CPU/GPU specifications, number of cores	Quad-core CPU / Cloud GPU instance
Memory	RAM specifications	8 GB RAM
Storage	Disk space for data, models, and logs	256 GB SSD
Software		
Frameworks	Python / Frontend frameworks	React.js, FastAPI / Flask
Libraries	Additional libraries	google-generativeai, pandas, pydantic, requests
Development Environment	IDE	VS Code, Jupyter Notebook
Data		
Data	Source, size, format	Sample Brand Copy Datasets, TXT / JSON / CSV
